## In Office Tests:

Test Name	Method of Collection	Results Received	Additional Information	Member Cost	Description
Galleri	Venous Blood Draw	10-14 Days	Galleri Website	\$1,250	<p>With a simple blood draw, the Galleri test provides multi-cancer early detection signals across 50+ types of cancer.</p> <p>Price includes a consultation with Dr. Cordovez to analyze results and determine a plan for next steps.</p>
BiomeFx	Stool Sample	2-3 weeks	BiomeFx Website	\$405	BiomeFx™ offers a clearer picture of the status of the gut microbiome.
Genomind	Cheek Swab	10-14 Days	Genomind Website	\$250	<p>Think of pharmacogenetic testing like genetic testing for medications.</p> <p>Pharmacogenetic testing assesses your genes to understand how you uniquely metabolize, respond to, and tolerate different drugs. This can help your provider personalize what medications they prescribe you, and at what dosages.</p>
Precision (P88) Dietary Antigen Test	Venous Blood Draw	4-6 Weeks	Precision Website	\$400	<p>The P88 Dietary Antigen Test is one single test combining IgE, IgG, IgG4 and complement (C3d) reactions to 88 of the most common foods found in the diet. The P88 Dietary Antigen Test was the first test on the market to measure and report immune complexes containing C3d.</p> <p>A highly comprehensive test of immune reactions, Precision Point Diagnostics' P88 Dietary Antigen Test helps you identify and address food allergies and food sensitivities in patients with chronic illness.</p>
